

Customer Testimonial

“The AIRtrac System has enabled Blakeslee insight and information never available before. Real time air and temperature information for every batch of concrete is extremely valuable information for our operation. AIRtrac allows us to know our air content for every batch and if it is necessary to take action while it’s still in the mixer. It provides us a much better understanding of mix time, batch sequencing and how admixtures affect our mix designs. Producing high quality, consistent concrete day in and day out is a very challenging job. The AIRtrac System definitely helps us do that.”

- Jim Fitzgerald, Quality Control Manager, Blakeslee Prestress
